### ProcessPro<sup>®</sup> Premier ERP Software a Perfect Fit for Allied Blending & Ingredients

St. Cloud, Minn., December 10, 2010 – Allied Blending & Ingredients is a combination manufacturing and distribution company that recently selected ProcessPro<sup>®</sup> Premier ERP to streamline its operations. Allied Blending & Ingredients has an extensive list of bakery, dairy, and specialty products it mixes and manufactures for both food and non-food companies. Allied Blending began its journey in 1981 in Keokuk, IA and has since expanded to operating five manufacturing and warehouse locations across the United States, with more expansion on the horizon.

“Allied Blending considered ProcessPro<sup>®</sup> ERP over a year ago, but they weren’t quite ready to make the transition,” says Amanda Humphrey, ProcessPro Product Consultant. “The company has grown significantly since that time, creating a greater need to look at ERP software again. ProcessPro was still at the top of their list, and when we were able to show them that our product growth matched and exceeded their company growth, they decided ProcessPro<sup>®</sup> Premier was the best fit.”

Allied Blending & Ingredients covers a broad industry spectrum with its products. They produce food products for use in the dairy and tortilla industries, pharmaceutical goods, non-food products for use in the laundry industry, and contract manufacture. With such a broad product context, and having multiple locations, Allied Blending & Ingredients needed a completely integrated, real-time solution for instant communication between branches. They also needed a sophisticated tool for material requirements planning.

“The decision makers at Allied Blending were especially impressed with the MRP and Business Analytics applications,” says Humphrey. “With such high volume and variety of material needed to fulfill their manufacturing commitments, they require extensive material management. Tighter control of materials and products improves efficiency and profit - a return they will be able to interpret with the Business Analytics application.”

ProcessPro<sup>®</sup> Premier is a fully integrated, real time ERP that offers a complete system from beginning sales order entry through the manufacturing and accounting process. Additionally, ProcessPro<sup>®</sup> Premier has been designed specifically with the regulated manufacturer in mind.

For more information about ProcessPro<sup>®</sup> Premier and how it can meet your specific process manufacturing needs, visit [www.ProcessProERP.com](http://www.ProcessProERP.com).

###

ProcessPro<sup>®</sup> Premier is the leading mid-market ERP software solution for the process manufacturing industry.
