### **Economic Stimulus Package Gives Companies Software Purchasing Power**

---

St. Cloud, Minn., July 17, 2008 -- Just this past February, Congress enacted the Economic Stimulus Package of 2008. This legislation was designed to give companies an incentive to increase spending. It was also intended to provide companies with a financial resource to purchase assets and make other business improvements.

"I talk with a significant number of company decision makers that are unaware that software is considered an asset," says Scott Fujan, ProcessPro VP of Sales and Marketing. "As I help manufacturing companies understand the full benefits of the stimulus package, they begin to see that by investing in and implementing an ERP system now they can reduce the costs of qualifying property."

Computer software has been considered qualifying property since 2002. But this provision won't last forever and is expected to be phased out after 2010. Some experts say this provision will be phased out even sooner, possibly by the end of 2008.

"ProcessPro® software provides manufacturers the benefit of not only being a qualifying property asset, but is also a tool in making business improvements, giving manufacturers double the advantages with only one purchase," says Julie Donat, ProcessPro Product Manager.

As a robust ERP system, ProcessPro® software promotes business improvement with full manufacturing and financial integration, offering a complete system from beginning sales order entry through the manufacturing and accounting process. It also integrates with several databases and operating systems as well having full integration with Microsoft Word® and Excel®, popular spreadsheets, databases, and charting and presentation programs.

ProcessPro® software is also the ERP solution many regulated manufacturers have partnered with to help them line up with FDA regulations. In combination with each company's own standard operating procedures and the software's sophisticated lot tracking capabilities, security features, and audit trail and electronic signatures feature, companies have the tools they need to be in compliance with current Good Manufacturing Practices.

For more information about ProcessPro® ERP software, or to schedule a free demonstration, call 1-800-457-3548 or visit: <http://www.ProcessProMFG.com>.

###

ProcessPro® software is the leading mid-market ERP software solution for the process manufacturing industry. Designed specifically for manufacturers that combine batches of mixtures, ProcessPro® software seamlessly integrates all aspects of plant operation, from beginning order entry through manufacturing, packaging, shipping and accounting. ProcessPro® software is available with full source code and is sold and supported directly by ProcessPro. Visit ProcessPro's web site at [www.ProcessProMFG.com](http://www.ProcessProMFG.com) or call 800/457-3548 for more information.
