Inventory Control Application Saves Time, Money, Gives Competitive Edge.

St. Cloud, Minn., January 5, 2007 -- Recent reporting from ProcessPro client, Swiss-American Products, Inc. revealed a physical inventory adjustment of less than 1%. "This level of accuracy is astounding," says Marianne Prom, ProcessPro Implementation Specialist. "Typically companies can expect to see 5-15% inventory adjustment."

As a part of a complete ERP system, ProcessPro Inventory Control application automatically tracks inventory balances, serial numbers, lots and warehouse location information.

"Because we have such an accurate and reliable inventory control system, we can increase our inventory turns by driving safety stocks to a minimum, increasing cash flow and lowering carrying costs and interest expense," says Ede Payne, COO of Swiss American Products, Inc.

"Not only does ProcessPro's precise inventory control increase the bottom-line for our clients, it also saves them a bundle of time," says Val Quarve, ProcessPro National Sales Consultant.

The Physical Inventory feature allows a company to proceed with physical inventory counts without delaying manufacturing and shipping operations.

"Since implementing ProcessPro, we are turning our inventory 25% faster than before, without having made a focused effort to do so," says Payne. "With the results of our last inventory, we are now turning our attention specifically to increasing turns and expect to achieve additional gains."

ProcessPro IC reports provide real-time inventory balances for up-to-the-minute, on-screen access anytime.

"As a contract packager, we can differentiate ourselves to prospective customers by providing ACCURATE up-to-the minute inventory positions," says Payne. "We can even automate sending them a report every week. This is a HUGE plus when a customer supplies components and is comparing suppliers. This is a service we offer that doesn't cost us anything, but gains us much."
