

Integrated ERP Lot tracking reduces recall challenges for food manufacturers...

ProcessPro®, an industry leading Enterprise Resource Planning system, integrates lot tracking functionality with all the business and manufacturing processes of a food manufacturer - including sales orders, inventory control, production scheduling, purchase orders, formulation, regulatory compliance, and more - into an enterprise-wide system.

Product traceability has never been more important than now. Recall reporting is a regular occurrence in national news headlines. Thousands of products are recalled every year, and often times manufacturers lack the proper tools to recall their products.

“Mastering true lot tracking is the key to compliance with 21 CFR requirements for both daily operations and for events such as product recalls,” says ProcessPro Lead Product Consultant, Amanda Mackendanz.

In order to achieve true lot tracking, a system must be in place where raw materials can be traced seamlessly from receipt through shipment, with all transactions posted in real-time.

“When businesses use multiple systems to manage their operations, they are prone to errors, making compliance difficult to achieve,” states Mackendanz. “Compliance is critical when a recall is necessary due to the time-sensitive product recall process.”

ProcessPro® ERP software seamlessly integrates all areas of a business into a single solution to allow food manufacturers to easily maintain process controls. Lot tracking capabilities within the system provides cradle-to-grave tracking for all raw materials through the finished product, all posted in real-time.

“A real-time system keeps all postings current and accessible to all departments,” Mackendanz continues. “This could save hours, even days, when trying to track items in a recall.”

ProcessPro® software helps manufacturers track lots in real-time by utilizing a bar code system to trace the location of raw materials and finished goods at any given moment. This functionality can reduce the volume of product a manufacturer would have to recall, eliminating the possibility of shutting down its operation.

For more information about ProcessPro and the manufacturers who use ProcessPro® ERP software, or to schedule a free no-obligation demonstration, call 1-800-457-3548 or visit www.ProcessProERP.com

ProcessPro® software is the leading mid-market ERP software solution for the process manufacturing industry. Designed specifically for manufacturers that combine batches of mixtures, ProcessPro® software seamlessly integrates all aspects of plant operation, from beginning order entry through manufacturing, packaging, shipping and accounting. ProcessPro® software is available with full source code, and is sold and supported directly by ProcessPro.
