Modern Concepts, Inc. Chooses ProcessPro[®] Premier

St. Cloud, Minn., May 14, 2010 -- Modern Concepts, Inc. recently selected ProcessPro[®] Premier ERP software to manage its production processes. This growing company of Compton, California manufactures plastic product colorings and finishing plastics, chemicals and fertilizers, pharmaceuticals, and petrochemical, biochemical and biotechnical products.

Like many chemical production companies, Modern Concepts must be able to track lots, meet ISO9000 reporting requirements, and be able to produce Material Safety Data Sheets with each product. Additionally, because of the nature of its pharmaceutical products, Modern Concepts must also adhere to cGMP regulations.

“Modern Concepts has a very unique line of products from a regulation perspective,” says Cheryl Irons, Product Consultant, ProcessPro. “The company looked at other software packages and found that none could compare when it came to lot tracking, document production, and regulation management all in one ERP.”

Because of its wide variety of products, Modern Concepts also needed a software package that could support multiple formulas as well as tracking and making changes to formulas. Some of the changes in the product formulas are as simple as changing the product color, but this change can be very complicated without an integrated ERP system.

ProcessPro[®] Premier is a fully integrated, real time ERP that offers a complete system from beginning sales order entry through the manufacturing and accounting process. A fully integrated system is a key tool for companies that require lot tracking, MSDS, and ISO9000 capabilities.

For more information about ProcessPro[®] Premier and how it can meet your specific process manufacturing needs, visit www.ProcessProERP.com.

###

ProcessPro[®] Premier is the leading mid-market ERP software solution for the process manufacturing industry.
