Rising Nutritional/Food Supplement Company Selects ERP Solution

St. Cloud, Minn., April 20, 2007 -- National Vitamin Company, a growing manufacturer of dietary supplements and cosmeceuticals, recently selected ProcessPro[®] software as their ERP solution. Experiencing exponential growth since the company's inception in 1974, National Vitamin Company made a strategic business decision to consolidate their California and Nevada manufacturing facilities into one 320,000 square foot building in Casa Grande, Arizona.

"This move was preceded by the realization that we needed to get more efficient and take advantage of the cost savings of combining operations," said Earl Courtney, President. "Our next realization was that we needed help in the areas of customer service, sales analysis, formulation, pricing, purchasing, inventory control, multi-state payroll reporting, and financial statement processing."

National Vitamin Company desired a fully-integrated, real-time ERP system that included instant updates to inventories. In addition, they needed a method to move raw materials, works in process, and finished goods through the ordering, receiving, quarantine, quality control, manufacturing, packaging, and shipping processes.

"We feel that ProcessPro software, integrated with state-of-the-art bar code scanning equipment, is the best software choice to achieve our goals and to demonstrate FDA and GMP compliance at the same time," said Earl.

ProcessPro's FDA and cGMP compliance features include an Inventory Control module that automatically tracks serial numbers and lot numbers, quarantines ingredients and finished goods for Quality Control testing, and updates inventory balances in real-time. It is also capable of Product Tracking, Revision Control, Audit Trails, and much more.

"ProcessPro is tapping into the nutritional support market well ahead of other ERP systems," said Val Quarve, ProcessPro National Sales Consultant. "The management of National Vitamin Company recognized early on in the software review process that ProcessPro had applicable, usable tools that would support their business goals and objectives for achieving the next level of "Best in Class" manufacturing practices."

ProcessPro software is a robust ERP system with full manufacturing and financial integration, offering a complete system from beginning sales order entry through the manufacturing and accounting process with security features ensuring FDA compliance.

For more information about ProcessPro software, or to schedule a free demonstration, call 1-800-457-3548, email info@processpromfg.com, or visit <http://www.ProcessProMFG.com>.
