PharmaForm Teams up with ProcessPro for Tightest GMP Controls

St. Cloud, Minn., February 5, 2009 -- PharmaForm, LLC recently partnered with ProcessPro, developers of ProcessPro[®] software. ProcessPro[®] ERP was able to provide PharmaForm with the most advanced manufacturing controls, greater oversight and improved efficiency of their inventory control system for batch and commercial current Good Manufacturing Practices (cGMP) programs, and many other benefits.

Since 1996, PharmaForm has earned its reputation for its innovative solutions to challenging problems in the pharmaceutical industry. PharmaForm provides pharmaceutical product development services to all types and sizes of pharmaceutical organizations, offering dosage form development, analytical services, and cGMP manufacturing. Their products are made under the supervision of the highest quality systems in abidance with Food and Drug Administration (FDA) regulations.

"Companies can easily become overwhelmed with trying to keep current regulation standards in their production processes," says Scott Fujan, Regional Sales Manager, ProcessPro. "But with ProcessPro[®] software and with the team of experts at ProcessPro, companies like PharmaForm can shift their focus to other important manufacturing details."

ProcessPro[®] software is precisely the tool PharmaForm needs to maintain their top quality production as well as adhere to FDA and Drug Enforcement Administration (DEA) standards. ProcessPro[®] software's FDA Compliance application provides tight user access controls, electronic signatures, and Bill of Material product tracking log. Within the product tracking log, formula creation, modification, deletion, and activation status are all recorded and secure.

In addition to the production and manufacturing benefits, PharmaForm has gained advantages in several other areas of their operation, providing them seamless integration across the company.

"PharmaForm is pleased to incorporate the ProcessPro[®] software automated warehouse and financial tracking applications as a means for improving the efficiency of the whole organization. We are excited about the high level of functionality available in the product," says Jason M. Vaughn, Ph.D., Vice President, Operations of PharmaForm.

ProcessPro[®] software is the leading ERP solution among pharmaceutical manufacturers because of its FDA compliance features including security audit trails, electronic signatures, and validation services. ProcessPro[®] software seamlessly integrates Order Entry, Inventory Control, Purchase Orders, Accounts Payable, Accounts Receivable, General Ledger, and more!

For more information about ProcessPro and the manufacturers who use ProcessPro[®] ERP software, or to schedule a free no-obligation demonstration, call 1-800-457-3548 or visit www.ProcessProERP.com

###

ProcessPro[®] software is the leading mid-market ERP software solution for the process manufacturing industry. Designed specifically for manufacturers that combine batches of mixtures, ProcessPro[®] software seamlessly integrates all aspects of plant operation, from beginning order entry through manufacturing, packaging, shipping and accounting. ProcessPro[®] software is available with full source code, and is sold and supported directly by ProcessPro.
