### ProcessPro Announces the Release of Premier 10

St. Cloud, Minn., April 30, 2009 -- ProcessPro, developers of ProcessPro<sup>®</sup> ERP software, announces the release of its latest version, Premier 10.

"The release of Premier 10 is a landmark for both ProcessPro and the mid-market process manufacturing industry," says Joe Blauert, President of ProcessPro. "Never before has this market had a more robust, tightly integrated solution for planning, scheduling, and managing its business while seamlessly addressing the needs for lot traceability, recall management, and meeting the requirements of FDA and other industry regulation."

Premier 10 offers several new features and enhanced functionality; below are just a few:

- **MRP Redesign:** MRP has been re-written to allow a single pass MRP along with buyer and planner wizards. Other new features include safety stock and QC lead time additions.
- **Active/Inactive Items:** Items may now be flagged as inactive when they are outdated and/or no longer available for sale or production.
- **Multiple BOM Links:** Ability to link multiple documents to the BOM and select which documents should be available at the time of printing the batch ticket.
- **Landed Cost:** With support of landed costs, users can now include direct purchase expenses such as shipping, insurance, and so forth in the cost of items after they have been received into inventory.

ProcessPro used a release candidate process for the release of Premier 10. "We've created a more solid release of this product because of the candidate release process," states Charles Rice, Director of Software Development. "It is as though we released Premier 10 with Service Pack 1."

"ProcessPro's growing client base and recognition in the marketplace speaks to this product's success and durability," comments Rebecca Kempenich, Marketing Manger. "More and more highly-regulated process manufacturers, and those with complex formulas and strict QC standards have partnered with ProcessPro to gain the tools they need to streamline their business and manufacturing operations."

In addition to the features listed above, Premier 10 boasts new and improved features that address the growing requirements of this market, including: manufacturing report drill-downs, electronic funds transfer for accounts payable, barcode support, automated period closing processes, and more.

For more information about ProcessPro<sup>®</sup> Premier 10 software call 1-800-457-3548 or visit: <http://www.ProcessProERP.com>.

###

ProcessPro<sup>®</sup> Premier is the leading mid-market ERP software solution for the process manufacturing industry.
