

**FOR IMMEDIATE RELEASE****ProcessPro® boldly makes known the recent release of the all new ...**

*Premier brags of several new features including updated and improved user interface, enhanced electronic signatures, and a multitude of new printing options for Order Entry and Purchase Orders.*

St. Cloud, Minn., July 25, 2007 - ProcessPro, developers of ProcessPro® software, announces the recent release of ProcessPro® Premier 9.070. The new features allow the user more control than ever before to view and utilize data through customization tools on the desktop, pick lists, screen displays, and much more.

“With features such as these that increase the friendliness of the product, our clients are sure to feel confident that they are able to work with greater efficiency and accuracy, thus increasing their productivity and, ultimately, the bottom line,” says Scott Fujan, ProcessPro VP of Sales and Marketing.

ProcessPro Premier expands its 21 CFR Part 11 compliance tools ensuring that companies are able to meet regulatory standards. In addition, lot expiration dates can be globally defined to be assigned as days-to-expiration or months-to-expiration.

“These new features ensure that our customers are meeting 21 CFR Part 11 compliance and cGMP requirements while providing additional flexibility in the user interface,” says Shanon Odegaard, Quality Systems Manager.

Order Entry improvements include the ability to view customer pricing, preview the order, print sales orders from Order Entry, and maintain Flexible Payment Terms to define customer payment options using discount dates and due dates.

“Our clients will be exceptionally pleased with the simplification of Order Entry,” claims Julie Donat, Product Manager. “By allowing the user to reprint forms from Order Entry, the shipping paperwork becomes much more manageable.”

Additional enhancements added to the product include: a new Item Forecasting routine, a new report that provides consolidated lists of PO Receipts, Inter-Company Transaction features, and many others. For a complete overview of the new release features, visit the ProcessPro website at:
