### Announcing the Release of ProcessPro<sup>®</sup> Premier Service Pack 9.071

---

St. Cloud, Minn., December 19, 2007 -- ProcessPro, developers of ProcessPro *Premier* software, releases its first service pack since Premier's completion in July. This service pack is loaded with features: an upgrade of the Automated Warehouse System and Advanced Scheduler, and the never-before-released R&D application.

These intuitive applications can streamline your operations even better than before, and all have new reporting capabilities that allow for more in-depth analysis of data.

"One of the changes many of our clients asked for was to remove the drop down options from the AWS menus," states Charles Rice, ProcessPro Product Development Manager. "By eliminating these options, employees are forced to use the hand-held scanners, thus securing accurate information for more precise real-time reporting."

Improvements were also made to the scheduling application. The full color screens with drag and drop batch ticket manipulation makes this state-of-the-art scheduler the most advanced of its type, resulting in it being the most informative and most user friendly scheduling software in the industry.

The most significant tool released with this service pack is the R&D application. This feature allows companies to create, manipulate, change, and experiment with new product developments without interfering with live production.

"Companies no longer have to put ideas or production on hold to advance their product," says Shanon Odegaard, Quality Systems Manager for ProcessPro. "This playground gives them freedom to explore and experiment without impacting the bottom line."

For more information about ProcessPro software and its newest applications, or to schedule a free demonstration, call 1-800-457-3548 or visit: <http://www.ProcessProMFG.com>

###

ProcessPro<sup>®</sup> software specializes in the implementation of ERP software solutions for the process/batch manufacturing industry. ProcessPro is the leading mid-market ERP software solution for the process manufacturing industry. Designed specifically for manufacturers that combine batches of mixtures, ProcessPro seamlessly integrates all aspects of plant operation, from beginning order entry through manufacturing, packaging, shipping and accounting. ProcessPro is available with full source code and is sold and supported directly by ProcessPro. Visit ProcessPro's web site at [www.ProcessProMFG.com](http://www.ProcessProMFG.com) or call 800/457-3548 for more information.
