### Stir Foods, LLC Rates Outstanding In Voluntary Audit

St. Cloud, Minn., January 18, 2008 -- Stir Foods, LLC of Orange, California recently completed its first Good Manufacturing Practices and Food Safety Systems Audit. Stir Foods received an excellent rating with their overall score results finishing at 96.3%.

More specifically, Stir Foods earned an incredible 96.7% in the Quality Systems component of the audit. With the use of ProcessPro<sup>®</sup> software, this growing food manufacturer is able to control the quality of its products beginning with incoming raw materials, through ingredient manufacturing, all the way to final packaging. With this quality program securely in place, Stir Foods is sure to comply with cGMP regulations.

"With the use of QC status, ProcessPro is designed to only allow raw materials into production once their quality has been verified," states Shanon Odegaard, ProcessPro Quality Systems Manager. "And likewise, no outgoing products are released until they, too, have passed quality regulations."

Another significant element of success for Stir Foods was their ability to recall products in record time. When the auditor conducted a mock recall on a sauce product, 100% of the product was accounted for in 13 minutes! The minimum requirement for recalling a product is 2 hours, but with ProcessPro's automatic lot tracking capabilities Stir Foods was able to retrace outgoing products with complete accuracy and exceptional speed. With the execution of a simple report, the quality control team at Stir Foods was able to track serial numbers and lot items whether the products were stored, ordered, or shipped.

"To date, Stir Foods has never been required to perform a recall on its products," says Glenn Weber, VP Finance & Administration at Stir Foods. "But after the success of this mock recall, we are exceptionally confident that any of our products could be located before a catastrophic situation occurs."
